

HealthNet Homecare UK Ltd | UK Pharmacy and Secondary Homecare

HealthNet Homecare deliver homecare services for many complex treatments, helping patients who have been referred from an NHS Clinic/Hospital to gain access to their medication and treatment. In addition to this, HealthNet also provide tailored Clinical solutions to assist Patients in their own home - from training Patients on how to take their medication, to checking in at regular intervals to see how their treatment is going.

uniFLOW really helps to control the paper that is found within the business. The security of printing via PIN, coupled with the savings made in reduced printing has significantly benefited our business during a period of rapid growth.

Terence Siddles, Head of IT

Customer challenges and requirements

Previously HealthNet operated a variety of differing branded printers across multiple sites. Due to limited device functionality, the inability to get consistent support across varying models and high printing costs, Canon were able to propose a consolidated and consistent solution covering all sites and requirements.

The aim of this project was to reduce costs, standardize the support and contingency as well as implement a reliable solution, which could be managed centrally (or in this case, from anywhere).

The concept of consolidating smaller departmental printers with a larger (but singular) offering, reduces costs and toner cartridge inventory.

The solution

Canon offered uniFLOW, including its My Print Anywhere functionality, as the leading solution. The concept included installing MFP's in high foot traffic locations; equidistant from many departments for fairness but also with the ability to cope with the high volume prints required for key departments (for example, Finance). The secure Pin printing functionality was a real benefit to business operations, keeping Patient information safe when required to be on printed media.

Connected devices

- 4x iR ADV C5540i
- iR ADV DX C5840i
- 2x iR ADV C356i
- 3x MF428x
- 12x LBP312x
- LBP654Cx

Software solution

- uniFLOW 2018
- Secure Printing (My Print Anywhere at any time)

Benefits

The revision and consolidation of the printer fleet has ensured that printing, scanning, and copying are now available to all employees within HealthNet – without adding significant cost.

The PIN Printing maintains a high level of data security within the business, something which is highly valued both internally and by HealthNet's partners as they see this as a great benefit.

The My Print Anywhere functionality provides a fantastic benefit as it drastically reduces unnecessary and accidental prints as they are queued for release until the user decides to print. The resilience built-in by being able to pull the print jobs to any printer when required means zero impact from printer downtime.
