The uniFLOW Embedded Applet for OKI provides a device-integrated solution enabling job release from a secure print queue and print accounting on OKI devices. Managed by uniFLOW, OKI multifunctional devices are easily integrated within your print fleet.

{ One Driver for all – the uniFLOW Universal Driver }

For submitting jobs to OKI devices users are provided with one single driver – the uniFLOW Universal Driver. Its unique technology allows users to choose any network printer from which to release a job as print jobs will follow the user from device to device, regardless of model or manufacturer. The uniFLOW Universal Driver ensures correct output as requested which reduces user dissatisfaction with the printing process and saves costs by cutting waste.

{ Release to any Device }

All print jobs are stored in a user's personal secure queue until they are ready to release them at the printer of their choice. This can be any networked printer with the uniFLOW embedded applet installed. Users can select which of their print jobs to release from a list displayed directly on the device screen or from the uniFLOW app running on their smartphone or tablet.

{ Multi-Level Cost Center Selection }

uniFLOW allows organizations to assign costs to a multi-level cost center to allow chargeback to the appropriate customer or project code. Users can simply select which cost center to charge the job to on the screen displayed on the device control panel.

{ Cost Savings, Accounting and Reporting }

Any secure print jobs that have not been collected from the OKI device within a predefined time are automatically deleted rather than sitting in a printer output tray. uniFLOW allows organizations to monitor savings made through improved printing practices e.g. deleting secure print jobs. With this information, better printing rules can be established to manage an entire device fleet or to create new rules and routing workflows that will decrease and optimize printing within the organization.
Immediate Benefits

{ Improve Employee Productivity }
All print jobs, regardless of how they are submitted to uniFLOW, appear in the user’s personal secure print queue and can be released from any device, regardless of model or manufacturer i.e. users can print securely using any connected device.

{ Increase Document Security }
To prevent unauthorized use of the devices and to keep valuable and confidential information safe, uniFLOW requires users to identify themselves at a device. This, keeps confidential documents out of the wrong hands.

{ Help Save the Environment }
uniFLOW can provide the analysis to help implement an environmental printing strategy, saving valuable trees and improving environmental performance.

{ Control and reduce Costs }
Using the built-in reporting system, organizations can track and assess printing usage, allowing internal costs to be charged back correctly and current usage audited.
