The uniFLOW Embedded Applet for Xerox provides a device-integrated solution enabling device locking, job release from a secure print queue, print and copy accounting, and integration with the native scanning of Xerox devices. Managed by uniFLOW, Xerox multifunctional devices are easily integrated within your print fleet.

{ One Driver for all – the uniFLOW Universal Driver }

For submitting jobs to Xerox devices users are provided with one single driver – the uniFLOW Universal Driver. Its unique technology allows users to choose any network printer from which to release a job as print jobs will follow the user from device to device, regardless of model or manufacturer. The uniFLOW Universal Driver ensures correct output as requested which reduces user dissatisfaction with the printing process and saves costs by cutting waste.

{ Release to any Device }

All print jobs are stored in a user’s personal secure queue until they are ready to release them at the printer of their choice. This can be any networked printer with the uniFLOW embedded applet installed. Users can select which of their print jobs to release from a list displayed directly on the device screen or from the uniFLOW app running on their smartphone or tablet.

{ Multi-Level Cost Center Selection }

uniFLOW allows organizations to assign costs to a multi-level cost center to allow chargeback to the appropriate customer or project code. Users can simply select which cost center to charge the job to on the screen displayed on the device control panel.

{ Cost Savings, Accounting and Reporting }

Any secure print jobs that have not been collected from the Xerox device within a predefined time are automatically deleted rather than sitting in a printer output tray. uniFLOW allows organizations to monitor savings made through improved printing practices e.g. deleting secure print jobs. With this information, better printing rules can be established to manage an entire device fleet or to create new rules and routing workflows that will decrease and optimize printing within the organization.

{ Native Scanning }

Scanning documents is an important part of user’s daily work. Documents can easily be scanned to yourself with only a few clicks after logging on at the device. Within seconds the scans become available at the user’s desks for further editing or distribution.
Immediate Benefits

{ Improve Employee Productivity }
All print jobs, regardless of how they are submitted to uniFLOW, appear in the user’s personal secure print queue and can be released from any device, regardless of model or manufacturer i.e. users can print securely using any connected device.

{ Increase Document Security }
To prevent unauthorized use of the devices and to keep valuable and confidential information safe, uniFLOW requires users to identify themselves at a device. This, keeps confidential documents out of the wrong hands.

{ Help Save the Environment }
uniFLOW can provide the analysis to help implement an environmental printing strategy, saving valuable trees and improving environmental performance.

{ Control and reduce Costs }
Using the built-in reporting system, organizations can track and assess printing, copying, faxing and scanning usage, allowing internal costs to be charged back correctly and current usage audited.
