

# Embedded Applet

## PlotWave & ColorWave printers

Many organizations operate with a mixed fleet of printers, scanners and multifunctional devices. uniFLOW offers a wide range of embedded applets to provide a consistent user experience on small and large format devices across an organization. PlotWaves and ColorWaves are large format digital plotters that make printing, copying and scanning simpler than ever. The uniFLOW embedded applet for PlotWave and ColorWave printers enables users to securely release their drawings and administrators to track and monitor costs.

### Easy job submission

Users submit print jobs via the Windows® Printer Driver 2. They apply all appropriate settings and can select a cost center so that costs can be assigned to a department, project or customer. On pressing “print” the job is stored on the uniFLOW server, ready to be released at the device when required.

### Mobile printing

Mobility is essential in today’s business environment so users must be able to submit print jobs wherever they are. Users can submit print jobs via the Windows® Printer Driver 2 while working at their desk. uniFLOW also allows them to print from any location using a mobile device such as a smartphone or tablet. Temporary users and guests can also submit print jobs in the same way by sending the drawings they need to print to a specific email address. They will then receive an email containing a job code for authentication at a device from which they can securely release their documents.

### Flexible user authentication and secure job release

With the uniFLOW Embedded Applet, user authentication is required to access devices and allow secure job release. Users benefit from multiple authentication options to log in e.g. card, PIN, job code or smartphone. All print jobs, including jobs from mobile devices, are stored in a user’s print queue displayed directly on the ClearConnect user interface.

## Productive copying and scanning

uniFLOW integrates the embedded scan and copy functionality of PlotWave and ColorWave printers. Users can choose from a range of settings e.g. file type, color mode and image quality. A scan preview means scanned images can be checked. Users can switch back to their print queues directly from the scan and copy mode.

## Multi-level cost center selection

With uniFLOW, all printing can be assigned to a cost center. Each organization can define multiple hierarchical levels of cost centers so that costs can be charged back to the corresponding customer, project, department or user. Users can select the appropriate cost center when submitting a print job or directly at the device upon login.

## Cost savings, accounting and reporting

uniFLOW will track every print, copy and scan job processed by the large format printers and generate automatic reports on demand or on a regular basis.

# Immediate benefits

## Increase document security

All print jobs, regardless of how they are submitted to uniFLOW, are stored in a user's secure print queue and can only be released when a user is at the printer and authenticates.

---

## Improve employee productivity

One user interface for small and large format devices provides a simple to use print, copy and scan facility.

---

## Control and reduce costs

Using the built-in reporting system, organizations can track and assess printing usage, allowing costs to be charged back correctly and current usage audited.

## Help save the environment

uniFLOW can facilitate an environmental printing strategy, saving valuable trees and improving environmental performance.
